

STRUCTUR Hollow post block

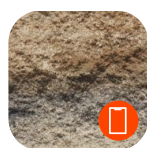

These are **split hollow blocks** for the construction of fence posts. **Two sizes** of the elements allow the design of wider and narrower masonry structures. The **irregular surface** of the post elements is due to the **splitting technology**. Thanks to this, their structure resembles **natural stone** and look **very good in combination with vegetation**. When used properly, perfectly match the architecture, as well as **gardens in modern and more traditional styles**.

Split blocks are suitable **not only for the construction of plot fences**, but also for the creation of **decorative walls or decorative flower beds**. In combination with **other products from the SPLIT line** – palisades and stair steps – they are an **extremely creative** material for constructing impressive arrangements around houses.

Zalecenia i informacje:

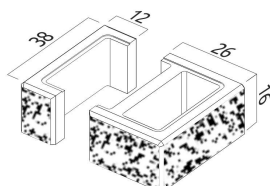

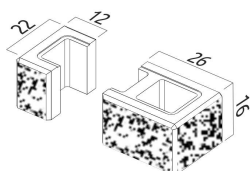

The fence may only be built on a properly made **continuous foundation**. Use **dry pre-assembly**. Install with **sealing glue**. **Moisten before filling** with concrete. Pour concrete in **1-3 layers at a time**. **Remove any dirt** generated during mounting on an ongoing basis. If unevenness is found, grind the upper surface to ensure that the blocks adhere exactly to each other.

Intended for use **with hollow wall blocks and caps of Structur collection**.

Production: made with the use of the one-ply technology and splited

Attention: For technological reasons pallet's weight may change.

Shapes and dimensions

Product details

Number of elements in the system: 1

Appearance: 2 sizes, split on all sides, composed of two elements, powierzchnia tupana przypominająca naturalny kamień

Production technology: split vibro-pressed concrete

Designation: flower beds, construction of the fence posts
