

Patiflor Pot

Patiflor is a **wheel-shaped pot** with a one-sided indentation. It has **several uses**: it can serve as a loose-standing flower pot, act as a kind of flower 'sound barriers' in busy streets or be used to construct retaining walls. The **rough structure** perfectly fits **backyard gardens and urban green spaces**.

It is also available in a **reduced size version**, as **Patiflor mini**.

Recommendations and information:

Installation in accordance with the construction practice. In the case of strengthening slopes of embankments – construction of Agaflo layers with 1/2 width shift. In the case of construction retaining wall over 1m high – it should be only used as the lost formwork for footing the reinforcement inside and filling with concrete. Quality of concrete, the amount of reinforcement and construction of bench foundation must be specified on a technical design.

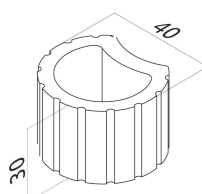

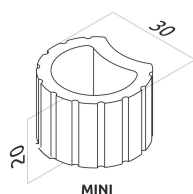

The shape allows any arrangement with exact matching to each other.

Bevel: non-beveled

Spacers: spacers-free – shape allows precise adjustment to each other

Production: made with the use of the one-ply technology
